Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant asserted that although Alcorn contains an ambiguous disclosure regarding the location of the injection point, the totality of the reference does not suggest the claimed placement. Applicant then pointed out that Frederiksen is primarily directed to a silencer and would not have been obvious to combine with Alcorn. Applicant also noted that SCR processes are only mentioned in passing by Yavuz, which is primarily directed to an oxidation catalyst process. Therefore, Applicant asserted that Yavuz also would not have been obvious to combine with Alcorn. The Examiner assured Applicant that these arguments would be given full consideration in Applicant's next response.
